

Kerabit Bio Plus Moss-removing Agent

Päivitetty 24.4.2020 Tulostettu 28.11.2020

Kerabit Bio Plus is a biodegradable moss-removing agent ready for use, sold in 5 l containers.

The moss-removing agent is suitable for use on roofs, yard paving, fences, awnings etc.

The amount of Kerabit Bio Plus moss-removing agent needed is dependent on the height of the vegetation. If the vegetation is low, one litre per 10 m² is needed. About 5 m² of a vegetation 2–3 centimetres high can be treated with one litre.

Moss removal from the roof should be done in time before it grows too much. There is a small chance that moss, which has been growing on the roof for a longer time, might have damaged the roof. In that case we recommend to check the roof after cleaning in order to localize eventual damages and repair needs.

Technical data

Manufacturer / Manufactured for	Nordic Waterproofing Oy/Lohja Plant
Country of origin	Sweden
Need for materials	1 l /10 m ² - 1 l /5 m ²
Container Size	5 l
Weight / package	5 kg

Additional information

Instructions for use

Before applying Kerabit Bio Plus, brush off all loose growth. Spray Kerabit Bio Plus moss-removing agent directly onto the vegetation so that it will become properly wet. About two hours after spraying, the vegetation will start drying off, and the next rain will flush the dead vegetation off the roof. The cleaning process will continue from one year to two years. Even after this, Kerabit Bio Plus will prevent formation of new growth for several years, depending on the conditions.

The amount of Kerabit Bio Plus moss-removing agent needed is dependent on the height of the vegetation. If the vegetation is low, one litre per 10 m² is needed. About 5 m² of a vegetation 2–3 centimetres high can be treated with one litre. As far as possible, apply the moss removing agent in calm and fair weather. Do not apply the agent onto a wet vegetation, during rain or if rain is expected in the next few hours. Wear protective clothing, gloves, goggles and a face mask during spraying. Protect the surrounding surfaces and plants. Kerabit Bio Plus is cleaned from tools and clothing with soap and water. Fixed surfaces are flushed with water.

Storage temperature +5 - +40 °C.

Content: Ethoxylated alcohols C9 - C11 0.5 - < 2.5 %, hexyl-D-glucoside 0.5 - < 2.5 % and benzyl-C12-16-alkyl dimethyl ammonium chloride 0.5 - 2 %.
